

Lab3a

Carl Frisenstam (carfri-5@student.ltu.se)

Gustav Larsson (guslap-5@student.ltu.se)

This lab was relatively easy, we learned a lot from the Lesson that introduced the lab. The assignment was very well explained so following the instructions were easy. We learned about the kernel and how to fetch data from Cp0.

As said before the lab was fairly easy, not really any hard parts. Had some issues with just getting A's in the output but that was fixed by adding a nop instruction after the bne instruction in proc1.

Yes we used syncsim while writing/debugging it's easy to find what's wrong when you can go through each instruction and see how it affects the register / memory.
